

"Our goal is to help young girls build character and coding skills as well as promote female representation in STEM fields."

-Caitlin Hall, Co-Founder

WHY GIRLS WHO CODE?

The gender gap in computing, engineering and STEM jobs is getting worse. Tech jobs are among the fastest growing in the country, yet girls are being left behind. In addition, the biggest drop in interest in computer science happens between the ages of 13-17.

OUR MISSION

Our club's mission is to have an educational program to help nurture these young women in developing skills they will carry throughout their lives. Our Binghamton University Girls Who Code Club Chapter wholeheartedly believes in the mission and values that founded our organization - empowering women, fostering diversity, acting with integrity, and striving for excellence.

WHAT WE DO

At Girls Who Code Club at Binghamton University, we provide an 8-10 week program every semester where girls in the Broome County region can partake in learning computer science.

- Sisterhood - Students join a safe and supportive environment of peers and role models where girls learn to see themselves as computer scientists, engineers and more!
- Code - Students learn concepts of loops, variables, conditionals and functions that form the basis for all programming languages
- Impact - Students collaborate and communicate in teams to design a cohesive computer science impact project that solves real problems the girls care about.

WHO CAN JOIN?

Club is open to all high school girls in the local area. For our Spring 2019 beginners class, we had 17 girls from 6 different high schools participate in our program and 6 teaching instructors who are Binghamton University students of various engineering majors.

"It's important to have women, who value the need for a strong support system for young girls interested in STEM, backing this program and seeing it through."

-Fiona Liang, Co-Founder

"It is our hope that by enrolling in this program, the girls will take away a sense of pride in their work and passion for technology. We want them to be comfortable with dreaming big."

-Kasey Hill, Co-Founder
